AAT12704-T12709 and AAT12961-T12974 represent hepatitis C virus (HCV) E1 and E2 protein coding sequence constructs. These sequences are included in vectors for the production of recombinant E1, E2, and E1/E2 proteins.

C in vectors for the production of recombinant E1, E2, and E1/E2 proteins.

CC invention. In the method, the envelope proteins are purified by invention. In the method, the envelope proteins are purified by carrying out a disulphide bond cleavage, or a reduction step with a carrying out a disulphide bond cleavage, or a reduction step with a constructs containing the purified HCV envelope proteins can be used for vaccinating humans against HCV, for in vitro detection of HCV antibodies in a sample, and in a serotyping assay for detecting one or antibodies in a sample and in a serotyping assay for detecting one or constructs can also be immobilised on a solid substrate and incorporated constructs can also be immobilised on a solid substrate and incorporated containing the presence or into a reversed phase hybridisation assay for determining the presence or into a reversed phase hybridisation assay for determining the presence or into a reversed phase hybridisation assay for determining the presence of into a reversed phase hybridisation assay for determining the presence of into a reversed phase hybridisation assay for determining the presence of into a reversed phase hybridisation assay for determining the presence of into a reversed phase hybridisation assay for determining the presence of into a reversed phase hybridisation assay for determining the presence of into a reversed phase hybridisation assay for determining the presence of into a reverse presence of the genotype of HCV. The new purification method preserves the conformation of the recombinantly expressed E1, E2 and E1/E2, and e1/E2, and enverse presence of the more reactive with human sera than those isolated using this method creating the presence of the conformation of the revombinance of the preserves the more more reactive with hum
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      GGGATGTACCATGTCACGAACGACTGCTCCAACTTCAAGCATTGTGTATGAGGCAGCGGAC

The vaccines are useful for inducing HCV-specific antibodies or for immunising humans against HCV. The recombinant HCV B2 and/or B2 proteins are useful as vaccines or therapeutics, in HCV screening and confirmatory antibody the star for raising antibodies, in the preparation of medicament, and for in vitro monitoring of HCV disease or prognosing the response to treatment of patients sufféring from HCV infection. The present sequence is a coding sequence described in the exemplification of the invention.

AMIL2704-T12709 and AMIL2961-T12974 represent hepatitis C virus (HCV) El cand E2 protein coding sequence constructs. These sequences are included in vectors for the production of recombinant El, E2, and El/E2 proteins. C in vectors for the production of recombinant El, E2, and El/E2 proteins. C invention. In the method, the envelope proteins are purified by carrying out a disulphide bond cleavage, or a reduction step with a carrying out a disulphide bond cleavage, or a reduction step with a carrying out a disulphide bond cleavage agent, after 1945 of recombinant host cells. C disulphide bond cleavage agent, after 1945 of recombinant host cells. C antibodies in a sample, and in a servityping assay for detecting one or more serological types of HCV present in a biological sample. The constructs can also be immobilised on a solid substrate and incorporated constructs can also be immobilised on a solid substrate and incorporated into a reversed phase hybridisation assay for determining the presence or the genotype of HCV. The new purification method preserves the conformation of the recombinantly expressed El, E2 and El/E2, and eliminates contaminating proteins. Antigens isolated using this method are mere reactive with human sera than those isolated by known
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ATACGACGCCACGTCGATTGCTCGTTGGGGCGGCTGCTTTCTGTTCCGCTATGTACGTG 480

XhoI; Stress condition II library, constructed by John
Davies and Jeffrey McDermott, combines cDNAs from CC-1690
cells grown to mid-log phase in TAP [MH4 - containing)
and shifted to TAP - NO3- (24hrs); H2 production
conditions (0, 12hr, 24hr) see Melis et al., (2000) Plant
Phys. 122: 127-135; TAP + H202 (1, 12, 24 hr); TAP +
Rhys. 122: 127-135; TAP + H202 (1, 12, 24 hr); TAP +
Rhys. 122: 127-135; TAP + Cd (1, 2, 6, 24 hr)
PolyA mRNA was purified from each sample, pooled and cDNA
synthesized. The cDNA was directionally cloned incolambda
Zap II (Stratagene) in the EcoRI (5;) and XhoRI (3)
sites. pBluescript II SK- plasmids were excised from the
lambda ZaP clones by superinfection with ExAssist
(Stratagene) Phase. The library was normalized using
method 4 described in Bonaldo et al., (1996) Genome
Research 6: 791-806.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               230 ccichangaritringachantandengrandridertenancerchangeccenanaececeng 289

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              //ncce="Vector: pBluescript II SK-; Site 1: EcoRI; Site 2: XhoI; Stress condition II library, constructed by John Davies and Jeffrey McDermoct, combines cDNs from CC-1690 cells grown to mid-log phase in TAP (NH4+ - containing) and shifted to TAP - NO3- (24hrs); H2 production conditions (0, 12hr, 24hr) see Melis et al., (2000) Plant Phys: 122: 127-135; TAP + H2OZ (1, 12, 24 hr); TAP + Sorbitol (1, 2, 6, 24 hr); TAP + Cd (1, 2, 6, 24 hr) spurhesized. The cDNA was directionally cloned and cDNA synthesized. The cDNA was directionally cloned into lambda Zap II (Stratagene) in the EcoRI (5') and XhoRI (3') sites. pBluescript II SK- plasmids were excised from the lambda ZAP clones by superinfection with Exhasist (Stratagene) phage. The library was normalized using method 4 described in Bonaldo et al., (1996) Genome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1 (bases 1 to 584)
